AutoCAD is one of the most widely used CAD applications available. Depending on license and volume, AutoCAD can be cost-prohibitive; there are tiers of plans that include a single user at a flat rate and higher tiers that include many users at a variable rate. AutoCAD is a software suite, and not just a CAD program. Each plan also includes the following applications: Civil 3D, Architectural Design Suite, Mechanical Design Suite, and Structural Design Suite. AutoCAD LT is designed for the non-commercial market and offers more of the standard tools than the pro version. Design a 2D or 3D drawing With AutoCAD, it's possible to create professional-quality drawings with either 2D or 3D capabilities. AutoCAD comes with a host of drafting commands to help you create accurate drawings quickly. For example, it's possible to create a 2D circle by drawing a polyline, which can then be converted into a 2D circle or circle sector via the SHAPE command. With this drawing, you can create the blue curved lines by entering a single command and dragging the mouse. 2D drawing commands Below is a table of the basic drafting commands. Development tools include the.NET API, which allows C++ and C# developers to create their own add-ons in order to extend AutoCAD functionality. Also, several third-party development tools are available to help create new add-ons for AutoCAD. Visual LISP, a high-level programming language, has been used to automate routines for designing electrical and HVAC systems and to automate drawing tasks. Visual LISP is also used to create add-ons for AutoCAD. To further automate AutoCAD, two tools exist to allow the user to automate tasks: the Autodesk Exchange Apps and the drawing templates. AutoLISP AutoLISP is an extension language for AutoCAD that provides easy access to the Windows API, COM objects and other libraries. It can be used to automate drawing functions and to build functions that calculate and manipulate data. AutoLISP allows an application to be developed quickly and effectively. AutoLISP is built on LISP and has many of the capabilities of a high-level programming language. AutoLISP allows users to script custom tools and reports, such as instructions and dialogs, to assist in drafting processes. Visual LISP Visual LISP is a programming language that allows you to write automation scripts in an easy-to-learn, intuitive manner, similar to Microsoft Visual Basic. As with AutoLISP, Visual LISP allows you to script custom tools and reports, including instructions and dialogs, to assist in drafting processes. VBA Visual Basic for Applications

(VBA) is a Microsoft programming language that allows macros and VBA to be used to automate a process or tool in a Windows application. VBA is included with all versions of the Microsoft Office system. VBA can be used to script custom tools and reports, including instructions and dialogs, to assist in drafting processes. VBA allows programmers to script macros and create subroutines for use with AutoCAD. VBA scripts can be written in any application that supports them, including AutoCAD. AutoCAD Plugin for Visual LISP AutoCAD Plugin for Visual LISP (AutoCAD-XLISP) is an add-on which allows Visual LISP scripts to run within AutoCAD. It is intended to provide a single, common interface for VLISP programmers to access AutoC a1d647c40b
