A Windows Forms API is being released to enable AutoCAD 2008 customers to access AutoCAD data in a new way. Autodesk Exacting Dimensioning (ED) The Autodesk Exacting Dimensioning (ED) is a 2D/3D dimensioning and property management software platform, focused on infrastructure asset management and automation. Autodesk ED was first available on the internet as a demonstration site in August 1998, when it was called "Autodesk Exactdimension." The beta version was renamed "Exactdimension" for its release to beta testers in October 1998. Autodesk ED went into closed beta in January 1999 and was released to the public in February 1999. Autodesk ED closed its beta program in December 2000 and became fully public in March 2001. The company also introduced a new version, Autodesk ED V8, in September 2007. In addition to supporting AutoCAD, AutoCAD PLM, AutoCAD Map 3D, Autodesk Dynamo, and Autodesk Technical Communication products, Autodesk ED's ability to create "dimension specific views" of database data allows customers to more easily update and manage digital representations of their assets. Autodesk ED's ability to track and synchronize changes to objects and dimensions also assists companies in managing their infrastructure by means of automated rules or processes that can be triggered by changes to digital assets. According to the company, Autodesk ED is the first dimensioning platform to offer object-level tracking and synchronization capabilities.
