
the selected units - Create and edit keyboard macros for the selected units - Set controls for many units - Automatically select the default control set of a unit - View the current default control set of a unit - Set controls of one and more units - Remove the unit or any of its parameters - Change parameter group - Select units by name - Change the units parameter name - Select an audio unit - Control many units - Select units by track number - Change of the current units parameter group - Add a new unit - Add parameter - Add a new parameter to a unit - Automatically select the default control set of a unit - Control units based on track number - Set controls for many units - Add a track number to units - Remove units - Change the units parameter name - Change the units parameter name - Control units using keyboard - Move the cursor to control units - 77a5ca646e

HoRNet TrackUtility MK2 Free X64

----- TrackMuting function: Allows you to completely mute a specified track on one or more selected devices, removing even the beeps from the system. DC Removal function: Removes or reduces the DC (average) content of the audio stream. Channel Selector function: Selects one or more input tracks by simply moving the cursor over them, pressing the hotkey, and enabling or disabling the output for these tracks. You can also create a multi-channel map, so that the channels to be muted, selected or excluded are selected via a map. Magnus Audio Units: Output limitation using the Magnus Studio plugin. Output clipper: Cut the audio stream if the signal goes over the limiter. This function can be used in combination with the audio units. Phase Reversal: Reverse the phase of the audio signal, as a useful function for mixing. Audio Units VST2.4, VST3, AAX: Output limitation with auto-release time. Windows Meter: Allows you to change the value of any parameter on all instances. Fast speed up / fast down: Speed up or slow down the audio files, for example, for auditioning songs at a specified speed. Audio Units VST 3.6: Compatible with Audio Units VST3 format. Audio Units AAX: Compatible with Audio Units AAX format. Multitrack mode: Allows you to play and mix multiple audio files at the same time. RMS Meter: Allows you to measure the RMS of any input track or selected audio unit. AAX: Compatible with AAX format. 16 bit: Use TrackUtility in 16-bit mode. MIDI: Take MIDI data via a MIDI input. AAX: Compatible with the Audio Units. Magnus Audio Units: Compatible with the Magnus Audio Units. Free HLS/HLS+ streams: You can play any HLS/HLS+ streams as audio files. Gain: Allows you to adjust the gain of the audio input. Keyboard Hotkeys: Hotkeys are made by assigning them to a hotkey. Invert phase: Reverse the phase of audio. Multi-Track mode: Multiple tracks are allowed to be mixed at once. RMSc: Allows you to measure the RMS of an audio input signal. Silence Detector: Detects silence, allows you to mute the audio, and to split or merge

What's New in the HoRNet TrackUtility MK2?

Track utility for pro audio Track muting DC removal Channel selector Phase reversal Gain adjustment Output clipper Magnus output limiter Useful processors Instant TrackMute Instant DC removal Instant phase reversal Instant gain adjustment Instant output clipper Instant Magnus output limiter Instant stereo image control Instant auto gain Instant RMS meter Instant grouping function Instant windows Useful effects Time stretch Time warp Time spiral Chorus Flanger Phaser Echo Compression Delay Distortion EQ Loudness Channels in stereo Instinct Time to reach the limit Time To set the limit Time To set the limit Magnus L. Magnus R.
