As evidence has been collected on the skills and traits of millennials, we can also find how this generation is already having a significant impact on the tourism and hospitality industry. One significant impact is the increased prominence of millennial traits in our society as a whole. In fact, in some ways, millennials are the inheritors of traits and behaviours that originated in previous generations. For example, today we are well past the days of a 1940s generation that was not comfortable sharing personal information. Other previous generations of workers, such as Baby Boomers, expected to hear no more than "hello" and "good-bye" in their workplace, while millennials might well expect to hear more from their peers and co-workers. In the tourism and hospitality industry, these traits and behaviours are particularly relevant. For many years, companies and businesses in this industry have followed a certain motto: "putting the customer first." While this approach is commendable in theory, the approach to customer service in the tourism and hospitality industry is shifting in two key ways. First, companies must now be more attuned to the needs of their customers in order to provide effective and enjoyable service. Customer service is more than simply providing a product or service. The present invention relates to an automatic transmission for a vehicle. A known automatic transmission for a vehicle includes a gear ratio changing mechanism that is arranged in a gear train between an engine and a differential gear. The gear ratio changing mechanism is actuated by a hydraulically operated frictional engagement device. The frictional engagement device includes a clutch disk rotating along with a clutch hub fixed to an input shaft, a clutch plate rotating along with a clutch cover fixed to an output shaft, and a frictional engagement device that provides a connection between the clutch hub and the clutch plate. The frictional engagement device is actuated by a hydraulic pressure supplied from a hydraulic pressure supply source, so as to engage or disengage a frictional engagement device that provides a connection between an input shaft and an output shaft. The hydraulic pressure supply source is actuated by a solenoid valve or the like. It is desirable to shift a gear ratio with a higher hydraulic pressure in order to improve the drivability of a vehicle. However, the hydraulic pressure is supplied only from the hydraulic pressure supply source having a capacity corresponding to a gear ratio before the gear ratio is shifted. Therefore, the hydraulic pressure is supplied from the hydraulic pressure supply source having a capacity corresponding to a gear ratio of a subsequent gear ratio to be selected, and, hence, the hydraulic pressure may be insufficient. This problem may be solved by increasing the capacity of the hydraulic pressure supply source to supply a sufficient amount of hydraulic pressure. However, an increase in the capacity of the hydraulic pressure supply source results in an increase in the weight of a hydraulic pressure supply source, which is required to be driven when the gear ratio is changed. An increase in the weight of the hydraulic pressure supply source may be a problem, especially in the case where the hydraulic
