A little-known feature Photoshop is a powerful and versatile program, but one of its most basic functions that isn't immediately obvious is the image search function. Even though it is built into the file browser, it's not something that many people think to use until something is wrong with their image. If you don't know what to do when an image has been uploaded that's just missing something or has a problem, don't panic. Just run into your computer's file browser and pull up the file, then click on the "Search" tool. From here, type in any words you know. Your search text, in this case, is what's known as a "keyword" search.

As you can see here, the keyline search works by matching any word or sequence of words exactly, something that isn't necessarily easy to create. If you don't know what word you're looking for in an image, you can try this cheat sheet. There are plenty of other resources that show you exactly what to look for in a photo, but this is by far the easiest. With Photoshop's search, you can also look for and search for colors, subjects and any other element that can be found inside an image. Yes, the image will almost certainly be there. Just click the "Search" tool and make sure that you check the box for "Search for variations of text." When the text search has been successfully completed, you can see which image matches to your text. And if you click on the search result, you can see the different layers in the file, including any adjustments that have been made. From here, you can see that the adjustment has just been applied to the layer and that it's named "Adjustment." Not all adjustments are created equal. If you're more of a perfectionist than a casual user, you may see the need to make adjustments on your images. However, Photoshop isn't necessarily the best platform for this task. Grayscale Photoshop Users who are not exclusively into the color or graphic side of the software can still use it. It comes with a few options that make it extremely easy to get started with editing.

Most notably, it comes with a grayscale mode. When in grayscale mode, all the contrast in your image is turned on. Color is turned off. This enables the use of adjustment tools like the one seen

Brushes: There are three types of brushes: 1. Normal brushes 2. Adjustment Brushes 3. Flash Brushes Here are some examples of brushes: 1. Normal brushes New Normal Brush With this type of brush, the shape is fixed and all the pixels are moved up and down and along the shape. This can be used to add distortion to an image. For example, use the New Normal Brush to create the effect on the woman's face by adding distortion in her face. By dragging a white wedge over an image, you can create a key and use this as an outline on which to place the shape of the brush. 2. Adjustment Brushes Sketch Brush This brush is the opposite of the New Normal Brush, in that it makes the area you click soft. Use the Sketch Brush to create the effect of the woman's face by drawing her face. Adjustment Brush Use the Adjustment Brush to add corrections to an image, or to create an effect on an image. The Adjustment Brush is more suitable for corrections. You can use three types of adjustments: •Curves adjustment •Brightness-Contrast adjustment •Saturation adjustment When using the adjustment brush, use a small brush size or the Size slider. When using the selection tool, use a large brush size. 3. Flash Brushes Flash brushes are a great way to create special effects. They produce an immediate effect on an image. They also function like adjustment brushes. Click the New Brush button Using the brush, draw on the image. A preview of the result will appear as you paint. Drawing Tips Draw at a high resolution in Photoshop so the brush texture and controls are well defined. You will get a better result if the brush size is small, and when the strokes are hard and bold. To create a sharp line, hold down the Shift key and draw. 4. Eraser Brushes Eraser brushes are one of the most popular brushes in Photoshop. Using a brush like this, you can remove part of the image by erasing with soft pressure on the brush. Erase the Words 1. Select Erase 2. Set the Brush 3. Erase You
